

Bilal Ahmad

Backend Developer | .NET Developer

+923084157793 | bilalahmad040802@gmail.com | Islamabad, Pakistan | [LinkedIn](#)

Professional Summary

Backend developer with 2.5+ years building financial automation systems, ERP solutions, and high-performance APIs using .NET Core, C#, and SQL Server. Experienced in bot automation, real-time dashboards with SignalR, and optimizing database performance for large-scale transaction processing. Proven track record improving system performance by 8-10x through query optimization and batch processing.

Technical Skills

Backend: C#, .NET Core, ASP.NET MVC, RESTful APIs, LINQ, Dapper ORM, Entity Framework

Frontend: Angular, Vue.js, JavaScript, TypeScript, HTML, CSS

Database: SQL Server, Oracle, Stored Procedures, Query Optimization, Indexing

Tools & Practices: Git, Postman, Visual Studio, JIRA, Agile/Ad-hoc Development, Code Reviews

Specialized: SignalR (Real-Time Systems), Web Scraping, Window Services, EPPlus, Batch Processing, Agile Scrum

Professional Experience

Backend Developer

MPN Soft

Islamabad, Pakistan | Sep 2024 – Present

Tech Stack: .NET, C#, REST APIs, SQL Server, Vue.js, SignalR, Dapper

- Architected financial automation platform with 10-20 concurrent bots monitoring Turkish financial transactions, enabling 1,000+ users/hour to manage accounts through centralized dashboard without main website access
- Built real-time bot monitoring system using SignalR displaying live execution status, processed record counts, and error states
- Developed automated affiliation registration bot processing 100-300 daily site referral signups by programmatically filling web forms, eliminating 2-3 hours of manual operations work daily
- Built high-performance bulk import API handling 1,000-5,000 transaction records per batch using Dapper, improving insert speed by 8-10x (from 30-40s to 3-5s)
- Optimized dashboard reports reducing query execution from 20-30 seconds to under 2 seconds through index optimization, query rewriting, and server-side pagination handling millions of records
- Built web scraping bot collecting customer transaction data across 3-4 authenticated portal pages, implementing retry logic for connection failures and graceful error handling
- Developed file upload API supporting Excel, CSV, and PDF files up to 20MB with structure validation and organized server storage
- Created Excel report generation system using EPPlus producing multi-sheet formatted reports with filters
- Collaborate directly with clients and product manager in ad-hoc development cycle, handling new feature requests, production support, and bug fixes across team of 5 developers

Software Developer

Askari Bank IT Head Office

Islamabad, Pakistan | Apr 2024 – Sep 2024

Tech Stack: .NET Core, C#, Angular, Oracle, ASP.NET MVC

- Developed modular ERP system serving 100+ employees across Sales, Inventory, and HR modules with focus on credit/debit transaction management and inventory tracking
- Designed and deployed Paperless Leave Management System integrated with Oracle ERP, reducing HR administrative workload by 20+ hours weekly and enabling automatic payroll synchronization for leave deductions
- Led Angular upgrade from version 6 to 14 across entire application, improving UI responsiveness and reducing page load times by 30% through modern framework features and component optimization
- Migrated legacy MS Access data layer from OLEDB to Oracle database connections, improving API response times by 40% and enabling better scalability under concurrent user load
- Implemented multi-level approval workflows with delegation logic for manager absences, email notifications, and real-time leave balance tracking
- Collaborated with mid-level team on sprint planning, code reviews, and technical design decisions for ERP feature enhancements

Key Projects

Financial Automation Platform with Real-Time Bot Monitoring

.NET | C# | SignalR | SQL Server | Vue.js | Dapper

Built comprehensive financial automation platform enabling customers to manage Turkish transaction accounts through centralized dashboard, eliminating manual website interactions through intelligent bot automation

- Developed SignalR hub monitoring 10-50 concurrent financial automation bots with live status updates
- Displayed real-time metrics: execution status, last runtime, processed record counts, and error states
- Developed desktop application automating Turkish bank affiliate program onboarding for registered customers
- Programmatically fills and submits bank web forms using customer data, processing 100-300 registrations daily
- Built continuous monitoring bot refreshing transaction pages every minute to detect new customer activity
- Automatically syncs hundreds of customer transactions to local database for dashboard display
- Processes millions of records with server-side pagination (50-100 rows/page) for efficient data access
- Reduced report query execution time from 20-30 seconds to under 2 seconds through index optimization and query rewriting
- Improved dashboard page load times from 10 seconds to 1-2 seconds by eliminating unnecessary subqueries

Impact: Centralized financial operations eliminating need for customers to access main website portal directly. Automated repetitive registration and monitoring tasks saving operations team 15-20 hours' weekly. Enabled real-time visibility into automation bot performance reducing response time to system issues

Challenges: Maintaining stable bot execution despite main website changes, managing SignalR connection reliability, and optimizing database performance for millions of concurrent transaction records

SaaS Healthcare Management System – PayPal Payment Integration

ASP.NET Web Forms | C# | PayPal SDK | SQL Server

Integrated PayPal subscription payments into legacy SaaS healthcare platform tracking medical staff working hours, operation theater time, and lab rotations for automated payroll calculations

- Implemented secure PayPal subscription flow for clinics and hospitals purchasing modular access plans
- Configured SSL certificate requirements and built callback handler processing payment confirmations and failures
- Designed payment state management storing transaction details, subscription tiers, and module access permissions
- Handled complete payment lifecycle including PayPal redirects, return URL processing, and failed transaction recovery

Impact: Transformed manual subscription sales into automated online payment processing. Provided clinics flexible pricing based on usage and selected modules (staff tracking, scheduling, payroll)

Challenges: Implementing modern payment security standards within ASP.NET Web Forms constraints while managing complex callback workflows

Education

Bachelors of Engineering in Computer Engineering

National University of Sciences & Technology

Islamabad, Pakistan | Sep 2020 – Jun 2024

GPA: 3.09/4.0

Final Year Project: Engineered an AI-driven chatbot leveraging LLaMA 2, LangChain, and Pinecone for scalable document Q&A and real-time PDF summarization.

Certifications

- **Google Cloud Engineering** Jan 2025
- **Agile Foundations** Aug 2023

Additional Highlights

- 2.5+ years building enterprise ERP systems, financial automation platforms, and RESTful micro services
- Strong database optimization skills: reduced query times from 30s to <2s through indexing and query rewriting
- Experienced working directly with clients in fast-paced ad-hoc development environments
- Specialized in bot automation, web scraping, and real-time monitoring systems using SignalR
